

# INSTALLATION ENERGY CROSSWORD PUZZLE

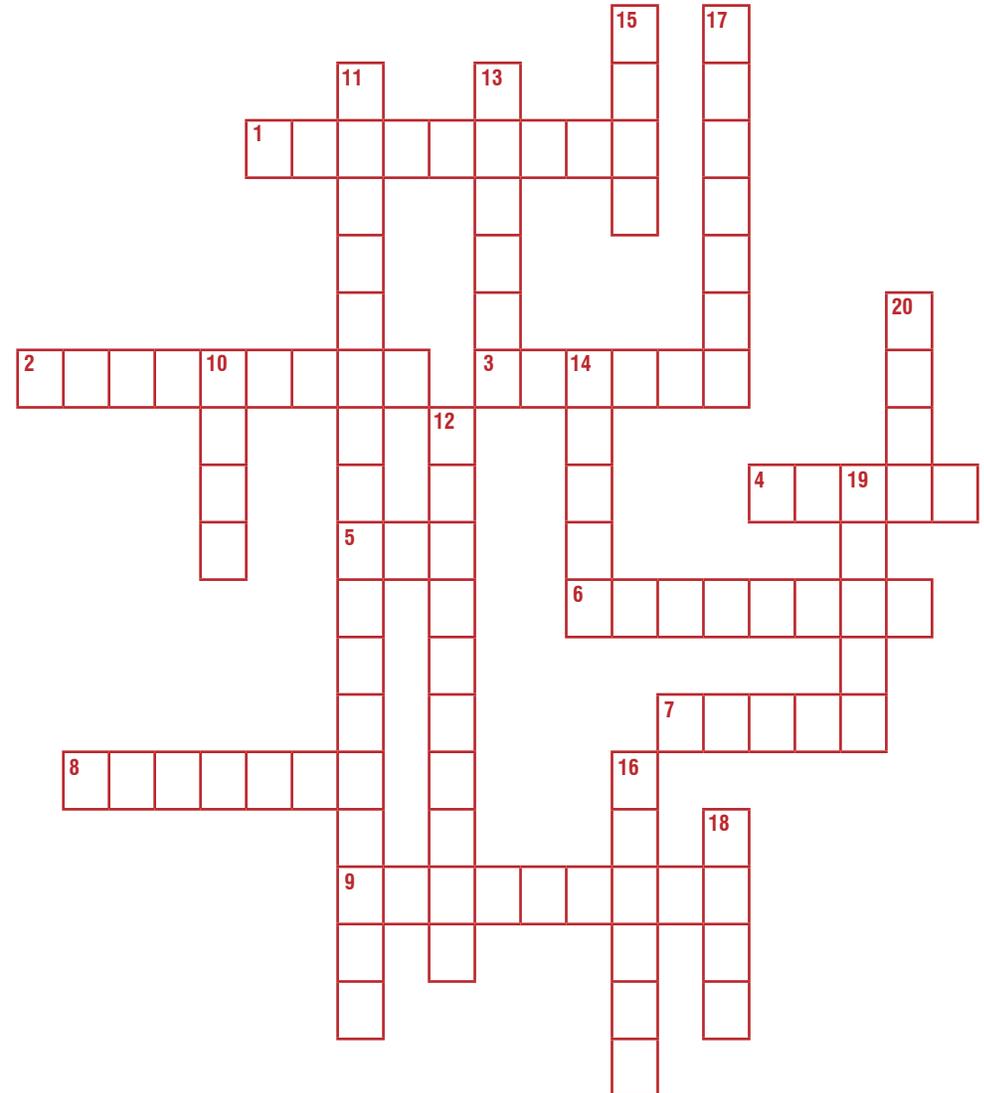

## Across

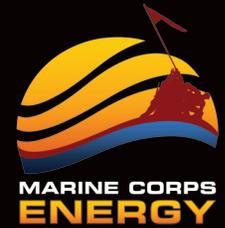

1. Solar panels, wind turbines, and landfill-generated gas are examples of \_\_\_\_ energy.
2. Buildings, machines, or vehicles that are designed to conserve energy can be called energy \_\_\_\_.
3. \_\_\_\_ is what powers Marine Corps facilities, vehicles, and operations.
4. When it comes to changing behaviors to use less energy and water, remember: You Have the \_\_\_\_.
5. Though the Marine Corps is making efforts to use biofuels and electric vehicles, many still run on \_\_\_\_.
6. Using microgrids to manage stored energy in the case of a disaster is an example of enhancing energy \_\_\_\_.
7. Photovoltaic panels, which convert sunlight into renewable electricity, are also known as \_\_\_\_ panels.
8. The primary goal of Marine Corps Energy is to ensure Marines always have the power needed to achieve the \_\_\_\_.
9. If the power goes out, you might use a backup \_\_\_\_, or bring one along to use at forward operating bases.

## Down

10. The prices of fossil fuels are unpredictable – if electricity gets more expensive, it can increase utility \_\_\_\_.
11. The \_\_\_\_ is a unit's energy point of contact.
12. Marines are known for their \_\_\_\_ in everything they do- energy use should be no different.
13. Each and every \_\_\_\_ has the ability to make a positive impact on Marine Corps energy use.
14. The Energy \_\_\_\_ is the shared vision that the efficient use of energy resources is critical to mission readiness.
15. Letting vehicles idle wastes \_\_\_\_.
16. October is known as Energy \_\_\_\_ Month, and is a great time to start responsible energy habits.
17. The money the Marine Corps spends on electricity, natural gas, and water make up the installation's \_\_\_\_ bill.
18. The \_\_\_\_ is an interconnected series of power plants and transmission lines that connect and power buildings.
19. \_\_\_\_ is used in large quantities to cool the power plants that generate electricity.
20. Helping the Marine Corps use fewer resources and spend less money is easy: If you \_\_\_\_ energy, you \_\_\_\_ money.

# INSTALLATION ENERGY CROSSWORD PUZZLE

## Across

- Solar panels, wind turbines, and landfill-generated gas are examples of \_\_\_\_ energy.
- Buildings, machines, or vehicles that are designed to conserve energy can be called energy \_\_\_\_.
- \_\_\_\_ is what powers Marine Corps facilities, vehicles, and operations.
- When it comes to changing behaviors to use less energy and water, remember: You Have the \_\_\_\_.
- Though the Marine Corps is making efforts to use biofuels and electric vehicles, many still run on \_\_\_\_.
- Using microgrids to manage stored energy in the case of a disaster is an example of enhancing energy \_\_\_\_.
- Photovoltaic panels, which convert sunlight into renewable electricity, are also known as \_\_\_\_ panels.
- The primary goal of Marine Corps Energy is to ensure Marines always have the power needed to achieve the \_\_\_\_.
- If the power goes out, you might use a backup \_\_\_\_, or bring one along to use at forward operating bases.

## Down

- The prices of fossil fuels are unpredictable – if electricity gets more expensive, it can increase utility \_\_\_\_.
- The \_\_\_\_ is a unit's energy point of contact.
- Marines are known for their \_\_\_\_ in everything they do- energy use should be no different.
- Each and every \_\_\_\_ has the ability to make a positive impact on Marine Corps energy use.
- The Energy \_\_\_\_ is the shared vision that the efficient use of energy resources is critical to mission readiness.
